Ecosystem Alarm Management outlines a manifesto in systems architecture that demonstrates how one can act true to strong ideals, whilst offering practical solutions to mitigate shared risks for the global commons. In adopting such a perspective, compromise and pragmatism isn't necessary for a focussed initiative towards assured platform stability.

A. T. Parkinson is a professional engineer with experience in the specification, expert witness and commissioning of complex control systems.

His investigations of platform ecosystem governance began with doctoral training at Cambridge University Engineering Department. 10 years on, he is now a keen advocate on action in the present generation, depending little on the forecasts and policies of nation states.
