Fringe Papers

Ecosystem Alarm Management outlines a manifesto in systems architecture that demonstrates how one can act true to strong ideals, whilst offering practical solutions to mitigate shared risks for the global commons. In adopting such a perspective, compromise and pragmatism isn't necessary for a focused initiative towards assured platform stability.

Aidan T. Parkinson is a professional engineer with experience in the governance, systems architecture, control systems specification, witnessing and commissioning of complex projects in the built environment.

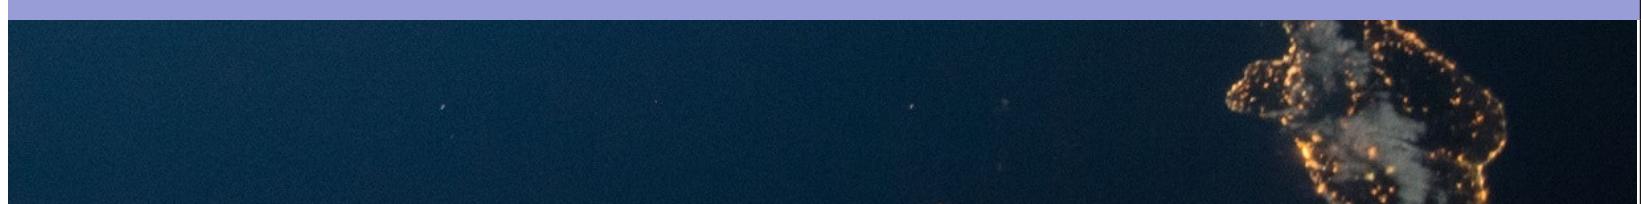

His investigations of platform ecosystem governance began with doctoral training at Cambridge University Engineering Department. 10 years on, he is an advocate of peoples approaches that emphasise learning in the present generation, depending little on the forecasts and policies of nation states.
